

## **Geese in Formation**

This fall, when you see Geese heading South for the Winter...Flying along in V formation...you might consider what science has discovered as to why they fly that way.

As each bird flaps its wings, it creates an uplift for the bird immediately following. By flying in V formation the whole flock adds at least 71% greater flying range than if each bird flew on its own. People who share a common direction and sense of community can get where they are going more quickly and easily because they are traveling on the thrust of one another. When a goose falls out of formation, it suddenly feels the drag and resistance of trying to go it alone...and quickly gets back into formation to take advantage of the lifting power of the bird in front.

If we have as much sense as a goose, we will stay in formation with those who are headed the same way we are. When the Head Goose gets tired, it rotates back in the wing and another goose flies point. It is sensible to take turns doing demanding jobs with people or with geese flying south.

If we have the sense of a goose, we will fly in formation, sharing the goal of making a difference for our children. We will rotate the demanding jobs, each taking turns leading our community toward a common vision.
